

Sobre mí

My name is Marcos. I'm 22 years old and currently a fourth-year software engineering student. I have three years of experience as a web developer, specializing in Python and JavaScript, and a few months of experience as a functional analyst. I'm a responsible person with a strong ability to learn and adapt, always eager to take on new challenges and continuously improve.

Experiencia Laboral

<div>CUNIX</div> <div>Córdoba</div> <div>oct. 2023 - nov. 2023</div>	<div>Contract Viewer</div> <div>A web app developed with Python, Django, JavaScript, and Vue.js, featuring user login functionality. The app allows users to view and download various types of contracts depending on their user type and permissions. It also includes an admin user who maintains logs of every activity performed on the site by different users.</div>
<div>CUNIX</div> <div>Córdoba</div> <div>sep. 2023 - oct. 2023</div>	<div>Modify payment portal</div> <div>Modification of the payment portal on a WordPress website for managing solutions for clients with arrears, adding the option to switch the language from English to Spanish on the site, as well as updating the payment form to correspond to the Spanish version of the site.</div>
<div>CUNIX</div> <div>Córdoba</div> <div>abr. 2024 - ago. 2024</div>	<div>Front-end developer and functional analyst in a comprehensive training management system</div> <div>As part of a team using the Scrum methodology, we are developing a Training Management System for a government entity in Chile. The system integrates with Moodle and a client application, synchronizing all course and student information.</div> <div>Initially, my role was front-end developer using React, where I created the user login view and the home page. As a functional analyst, I was responsible for gathering client requirements and translating them into user stories in Jira. I also created preliminary mockups using Figma.</div>
<div>Córdoba</div> <div>ago. 2024 - Actualidad</div>	<div>Full Stack Developer for a web application for a graphics company</div> <div>I am currently developing a web application with Python, Django, Django Rest Framework (backend), and React (frontend). It features JWT user authentication, roles, and protected routes. The goal is to implement a PDF file management system where users can add files to a shopping cart, view the printing cost, and decide whether to proceed and place the order.</div>
